

## CLAIMS

1           1. (Original) A blister pack comprising a front part having a recessed portion for  
2     receiving and containing an article to be packaged, a back part having a relieved portion  
3     adapted for insertion into the recessed portion of the front part for closure of the pack, and  
4     co-operating locating means on the front and back parts respectively to maintain the pack  
5     in a closed condition; ~~[characterized in that]~~ wherein the locating means comprises an  
6     abutment on the inner wall surface of the recessed portion of the front part, and a co-  
7     operating abutment on the outer wall surface of the relieved portion of the back part, the  
8     inner and outer wall abutments being located thereon such that they become inter-engaged  
9     to close the pack only when the back part is contained wholly within the recessed portion  
10    of the front part; the abutment on the inner wall surface of the recessed portion of the front  
11   part extends from said wall surface to a greater extent than that by which the abutment of  
12   the relieved portion of the back part extends from the outer wall surface thereof.

1           2. (Original) A blister pack according to Claim 1, wherein the front part has a  
2     flange extending around the rim of the recessed portion.

1           3. (Original) A blister pack according to Claim 2, wherein the flange includes an  
2     aperture for suspension of the blister pack upon a display hook.

1           4. (Currently Amended) A blister pack according to Claim 2, wherein the flange  
2     includes a deformation of material in a peripheral ~~[formation]~~ region to provide the  
3     appearance of a weld when the abutments are inter-engaged.

1           5. (Previously Presented) A blister pack according to Claim 1, wherein the  
2 abutment of the front part comprises a continuous ridge protruding inwardly from the wall  
3 surface of the recessed portion.

1           6. (Previously Presented) A blister pack according to Claim 1, wherein the  
2 abutment of the back part comprises a continuous narrow flange protruding outwardly  
3 from the relieved portion.

1           7. (Previously Presented) A blister pack according to Claim 1, wherein the front  
2 and back parts of the pack are connected together by an integral hinged portion, the entire  
3 pack being formed by deformation of a single sheet of translucent plastics material.

1           8. (Previously Presented) A blister pack according Claim 1, wherein the front  
2 part, on its inner or outer surface, has a surface texture to render the front part translucent  
3 with reduced transparency.

1           9. (Original) A blister pack according to Claim 1, wherein the front part has a  
2 stepped recess forming a plinth with an outer flange extending peripherally around the  
3 plinth.

1           10. (Previously Presented) A blister pack according to Claim 1, wherein the  
2 respective abutments of the front and back parts become inter-engaged with a snap action  
3 when the pack is closed.

1           11. (Canceled)
